COLONIAL HARDWARE

346623-02

SARGENT

his little book illustrates some pieces of hardware designed especially for the Colonial houses now so popular.

Hardware Trimmings for sideboards, dressers, bookcases, etc., are also shown, and a full line of Glass Door Knobs which will appeal strongly to home builders.

THE rich appearance which cut glass always gives, warrants some additional cost. In response to the present popularity for Colonial architecture, we have reproduced the Cut Glass Door Knobs of former days and have mounted them in an approved manner, thus producing a combination of Colonial style and modern mechanism which will be appreciated by the architect and please the occupant of the dwelling.

Sargent Glass Door Knobs fulfill all that is required in first-class goods, and like all of our Artistic Hardware, they are made for use as well as for ornament. The cut glass is of the best produced and the shanks and roses are of Bronze or of Brass, finished as preferred.

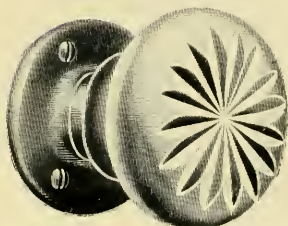

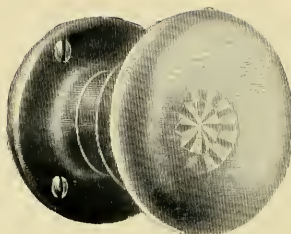

THE cheaper Knobs are of pressed glass, as indicated by the illustrations, but we also show different shapes and patterns in cut glass. In some localities the Round Knob is preferred, while the Octagon Knob meets with much favor elsewhere; all are of the same high quality, the difference in shape and cutting allowing a selection for various preferences.

The glass is securely fixed to the metal work so as to prevent it from working loose on the shank, and the Knobs have adjustments to suit different thicknesses of doors—adjustments that can be easily made when the Knobs are attached to the doors, and which will effectually prevent rattling and remain in place as adjusted.

Opalescent and Opal Glass Door Knobs

These Glass Door Knobs are particularly suitable for use in bathrooms; for this purpose the metal parts are of Nickel Plated Bronze or Brass.

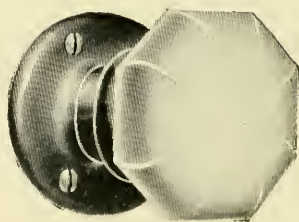

These Knobs are also desirable for use in kitchens with white enameled and nickel plated trimmings.

FOR many pieces of Colonial furniture Glass Knobs are appropriate. Those shown on the following page are similar in pattern to some of our Glass Door Knobs; they can be furnished in both Cut Glass and Pressed Glass and we have different shapes and sizes.

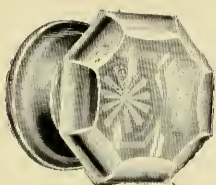

Glass Thumb Knobs for use on doors of small cupboards, medicine cabinets, etc., are shown on page 11.

To match the Opalescent and Opal Door Knobs used in kitchens, pantries and bathrooms we also illustrate small knobs for drawers and cupboard doors.

Some Colonial work requires the use of Metal Knobs instead of Glass, and in some cases it is desirable to use Glass for certain rooms and Brass or Bronze Knobs for the other parts of the house.

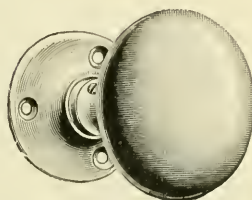

For such uses, we have the Oval and Round Knobs shown above and on the following pages. They are generally used with the Key Plates shown on pages 14 and 15 of this booklet.

Front Door Trimmings

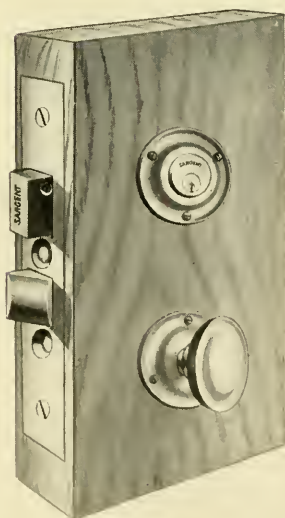

CB—Braddock Design

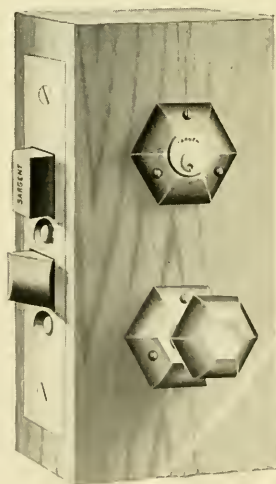

HB—Hadley Design

Several desirable combinations for use with our Cylinder Front Door Locks are illustrated. The Knobs are mounted on Roses which correspond in design with the Cylinder Rosettes.

This variation from the usual door equipment of elongated Escutcheon with Knob is meeting with considerable favor.

HC—Halifax Design

DC—Deerfield Design

Front Door Handles

WE illustrate on the following pages Front Door Handles especially suitable for Colonial houses. These are frequently used instead of the round or oval Knob and Escutcheon. The patterns of many of the Handles are old—fine examples of Colonial hardware—but we put with them our modern Cylinder Locks.

Sargent Cylinder Locks used with these Handles are examples of the best modern lock construction. The application of our famous Easy Spring principle, which allows the door to close so gently, together with the security of the Lock and small key, makes them very desirable.

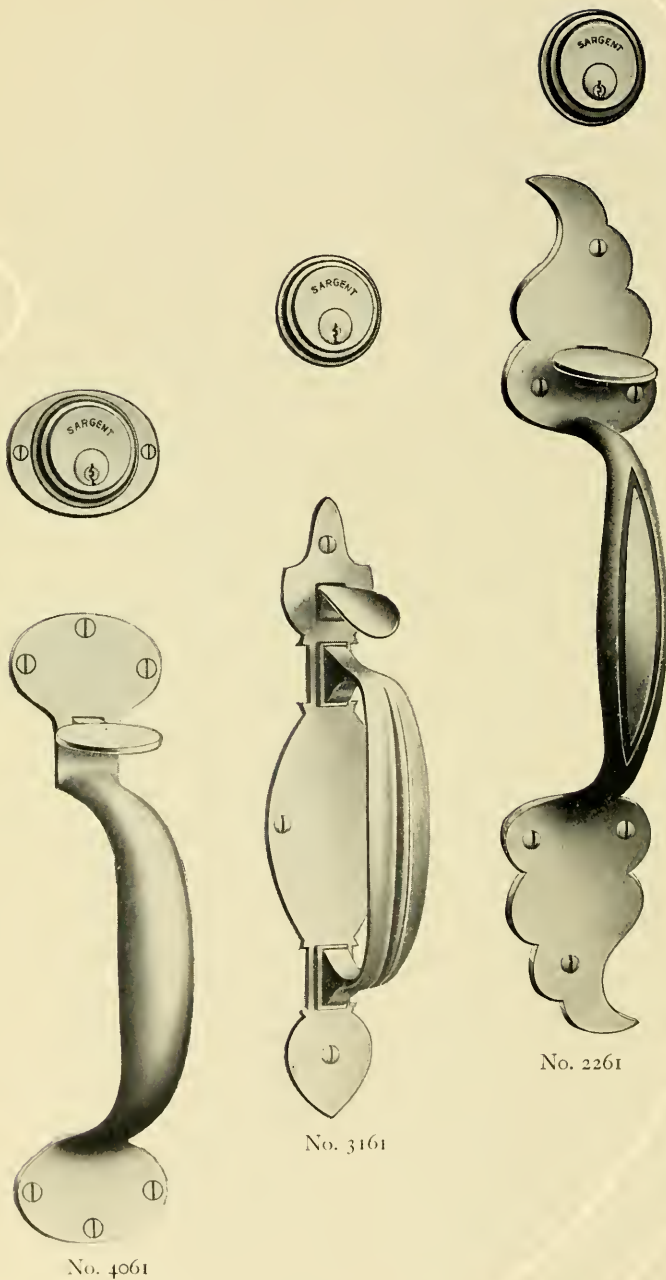

The Handles may be used in various ways to suit different preferences. They can be furnished with two Handles, one for the outside and the other for the inside of the door or one Handle for the outside with a Knob and Escutcheon or Thumb Knob on inside to match the other interior trimmings. This makes a desirable combination.

Dutch Doors are frequently used for Colonial dwellings. When special attention is given to the selection of hardware for this type of doors they are trimmed with Front Door Handles chosen from the patterns shown in this book. Personal taste may be suited in deciding which style to select, as all the patterns are appropriate.

Rim Locks

Another Colonial effect which is very pleasing is the use of rim locks, instead of mortise locks, with white wood work. These locks are supplied in ivory black finish and fitted with metal knobs as shown on pages 12 and 13; a Key Plate covers the key hole on the outside of the door.

DOOR Knockers are used principally for ornament in these days of push buttons and electric bells, but nothing is more appropriate for a Colonial residence than the new old-fashioned Knockers, and they may be used too, as of old, if desired.

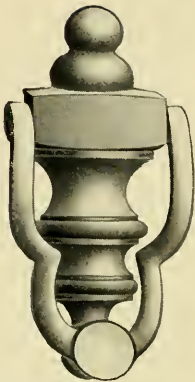

Genuine Colonial Patterns of Door Knockers are shown in this booklet. They are exact reproductions of those seen on the front doors of dwellings of Colonial days. We can furnish them in polished Brass or in any of the modern finishes.

Some patterns have a space in which the name of the owner may be engraved if desired.
